

MANAGING FESTIVE FIRES IN HOTELS

The festive period is one of the busiest times of year for hotel managers.

3.5 million people from the UK will travel abroad this Christmas.

From 2011–2015, festive fires caused an average of **\$14.8 million** worth of property damage per year.

1,000+ people

are treated for Christmas-related burn injuries each year.

THE TOP CAUSES OF FESTIVE FIRES ARE:

1 Lighting and electrical faults

2 Decorations too close to heat sources

3 Candles

TO AVOID FESTIVE FIRES:

Safety test electrical equipment

Keep decorations and trees away from heat sources

Keep candles away from flammable materials

Keep natural fir trees watered to avoid dryness

Importantly, ensure your hotel's fire alarms and smoke detectors are up to standard. Test detector regularly and select reliable, long-lasting batteries for peace of mind.

Choose Ultralife's 9V lithium battery — the world's longest life lithium 9-volt — for a 10-year service life, high energy density and versatile battery to help keep your guests merrily safe this festive season.

In 2019, Ultralife Corporation will also release the highest capacity 1800mAh CR123A battery on the market, the UB123A.

The UB123A's unique internal design offers better overall performance, a longer product life and improved reliability for hotel managers.
